

### NONWOVENS TRAINING COURSE

3.5 DAYS

# FABRIC PROPERTY DEVELOPMENT AND CHARACTERIZATION

How are certain nonwoven properties achieved and measured? Take this course and find out!

This course provides an in-depth understanding of how the most important nonwoven fabric properties are achieved and how they are measured. Properties such as tensile, basis weight, compressibility, softness, fiber orientation, distribution and diameter, moisture and vapor transmission, and flammability are considered. Learn how nonwoven fabric properties are developed, measured and controlled.
