

Hamid Ebrahimi is a PhD student at Wilson College of Textiles at North Carolina State University, where Hamid studies biobased polymers mainly in the form of fibers and nonwovens with a special look into poly(lactic acid) as the cheapest and most available biobased polymer in the market.

Hamid has been studying PLA all his graduate years and has published papers and talked in different conferences in this matter. Before starting his PhD, Hamid worked for 3 years as R&D and technical engineer in different fields where he gained great experience in professional team work, leadership development and project management. Hamid is an achiever and has a goal based personality which has enabled him to set goals and endeavor to reach that goals. Hamid loves learning and always positions himself to listen to different ideas and opinions.

Hamid enjoys reading and spends his spare time reading history, business and management, he also is a fitness enthusiast and enjoys coaching others to reach their fitness goals. Please email hebrahi@ncsu.edu to contact Hamid.
